EDUCATION

Jorhat Engineering College

Bachelor of Technology in Computer Science & Engineering

Jorhat, Assam, India

Nov 2021 – May 2025

EXPERIENCE

Frontend Developer

Mphasis

Bengaluru, India

Sep 2025 – Present

- Engineered and maintained 3 production-grade mortgage applications using React, TypeScript, and Redux, delivering reusable component libraries that accelerated feature development across teams.
- Built complex AG Grid interfaces supporting sorting, filtering, and pagination across large mortgage datasets, improving data accessibility for end users across all 3 applications.
- Developed reusable TSX component libraries adopted across multiple platforms, reducing code duplication and improving UI consistency in the production codebase.
- Collaborated in Agile sprints using Git branching workflows, participating in code reviews and contributing to on-time delivery of frontend features for a major mortgage domain client.

Frontend Developer Intern

HCL Tech, Jigani

Bengaluru, India

Jun 2024 – Aug 2024

- Designed and built a full-stack **Employee Attrition Predictor** using ReactJS, HTML, and CSS, integrating Python ML models to classify attrition risk; validated by industry professionals for workforce analytics.
- Developed an interactive dashboard enabling HR users to input parameters and receive real-time risk scores, translating ML outputs into clear, actionable visual feedback.
- Adopted enterprise Git workflows and code review standards under senior engineers, gaining direct exposure to production-grade delivery practices.

Research Intern

IIT Guwahati

Guwahati, Assam

Summer 2023

- Researched supervised ML techniques — classification algorithms, model evaluation metrics, and data preprocessing — under academic mentorship at one of India's premier institutions.
- Designed and trained an ML model end-to-end: data cleaning, feature engineering, model selection, training, and performance benchmarking, producing a working demonstration prototype.
- Received formal certification and commendation from the research group for technical contributions and research rigour.

PROJECTS

Employee Attrition Predictor | ReactJS, HTML/CSS, Python, Scikit-learn

- Built a full-stack employee attrition prediction application using ReactJS and a Python-based machine learning model to classify employee attrition risk.
- Designed an interactive dashboard allowing HR users to input employee details and receive real-time prediction results with visual indicators.
- Integrated the trained ML model into the frontend through REST APIs and demonstrated the solution to industry professionals at HCL Tech.

Paying Guest Locator | HTML5, CSS3, Vanilla JavaScript

- Developed a responsive web platform enabling students to search, browse, and shortlist paying guest accommodations near Jorhat Engineering College.
- Implemented search functionality, property listing cards, filtering features, and a contact workflow from wireframe to deployment.
- Built the complete application independently using HTML, CSS, and JavaScript without external frontend frameworks.

Smoke-Dehazer System | Python, YOLO, OpenCV, Image Processing

- Developed a computer vision system combining the Dark Channel Prior (DCP) algorithm with YOLO-based object detection for smoke identification in surveillance footage.
- Applied image dehazing techniques to improve visibility before object detection, increasing the reliability of smoke detection.
- Designed the solution to support early fire detection and reduce emergency response time in public surveillance environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Python, C++

Libraries & Frameworks: React (TSX), Redux, Next.js, Node.js, TailwindCSS, AG Grid, Vite

Tools & Practices: Git, GitHub, Agile/Scrum, Code Reviews, REST APIs

Concepts: Component architecture, State management, Data grids, Performance optimisation, Responsive design

CERTIFICATIONS & INTERESTS

Certification: AI for Everyone — Coursera, Andrew Ng (Feb 2025)

Writing: Enjoy writing poems and articles as a creative outlet alongside technical work.

Other: Active in sports (lawn tennis, badminton, swimming); passionate about art and painting.
